

Uber Gulf Operations & Driver Performance Dashboard Report (2020–2025)

Executive Summary

This dashboard provides a comprehensive analysis of Uber's operational performance, revenue trends, trip activity, driver performance, and payment behavior across major cities in Saudi Arabia between 2020 and 2025.

The analysis highlights strong business growth, increasing revenue, improved fleet utilization, and varying performance levels across cities and driver categories. It also reveals several operational challenges that require strategic intervention to maximize profitability and customer satisfaction.

Business Performance Overview

Key KPIs

Metric	Value
Total Trips	2K+
Total Net Earnings	SAR 68.45M
Revenue Growth (YoY)	67.02%
Monthly Growth (MoM)	5.29%

Key Insights

- Revenue has grown consistently from 2020 to 2025.
- Fleet mileage increased significantly, indicating higher service demand.
- The company achieved strong year-over-year growth.
- Operational expansion successfully increased overall earnings.

Geographic Performance Analysis

Top Revenue Generating Cities

Rank	City
1	Tabuk
2	Medina
3	Dhahran
4	Abha
5	Jeddah

Findings

- Tabuk generated the highest revenue despite not being the largest city.
- Riyadh and Jeddah show strong demand but lower revenue efficiency compared to smaller cities.
- Revenue distribution is uneven across regions.

Business Issue

Revenue concentration in a few cities increases dependency risk.

Recommendation

- Expand promotional campaigns in underperforming cities.
- Optimize driver allocation based on city demand patterns.
- Introduce dynamic pricing in high-demand regions.

Revenue Growth Analysis

Annual Revenue Trend

Revenue increased from approximately:

- 2020 → SAR 2K
- 2021 → SAR 2K
- 2022 → SAR 4K
- 2023 → SAR 6K
- 2024 → SAR 9K
- 2025 → SAR 15K

Findings

- Strong upward trend across all years.
- Growth accelerated significantly after 2022.

Business Issue

Rapid growth may create operational bottlenecks.

Recommendation

- Scale fleet capacity alongside demand growth.
- Improve forecasting models for peak periods.

 Fleet Performance Analysis

Fleet Categories Performance

Category	Revenue Contribution
UberX	Highest
UberBLACK	High
UberSELECT	Medium
UberComfort	Medium
UberXL	Lowest

Findings

- UberX dominates both trip volume and earnings.
- Premium categories generate higher revenue per trip but lower demand.
- UberXL remains underutilized.

Business Issue

Fleet imbalance reduces asset efficiency.

Recommendation

- Reallocate vehicles according to demand.
- Launch targeted promotions for UberXL.
- Optimize premium category pricing.

 Payment Channel Analysis

Revenue Distribution

Payment Method Contribution

Cash	31.93%
Debit Card	18.76%
Credit Card	16.76%
Apple Pay	16.95%
Mada	15.60%

Findings

- Cash remains the dominant payment method.
- Digital payments represent more than 68% collectively.

Business Issue

Heavy cash usage increases operational and fraud risks.

Recommendation

- Encourage cashless transactions.
- Introduce rewards for digital payments.
- Improve payment integration with Mada and Apple Pay.

Driver Performance Analysis

Acceptance Rate by City

Best Performing Cities

1. Abha
2. Dammam
3. Taif

Lowest Performing Cities

1. Khobar
2. Medina
3. Tabuk

Findings

- Acceptance rates vary significantly across cities.
- Some cities show potential driver supply shortages.

Business Issue

Low acceptance rates increase customer wait times.

Recommendation

- Implement incentive programs.
 - Improve driver scheduling.
 - Increase driver recruitment in low-performing cities.
-

Driver Leaderboard Analysis

Findings

- Significant earnings gap exists between top drivers.
- Some drivers complete substantially more trips than others.

Business Issue

Performance imbalance among drivers.

Recommendation

- Create performance-based rewards.
 - Introduce driver training programs.
 - Share best practices from top-performing drivers.
-

Driver Earnings Breakdown

Earnings Composition

Component	Contribution
Trip Earnings	74.07%

Component	Contribution
Surge Earnings	10.96%
Incentives	9.08%
Tips	5.89%

Findings

- Drivers depend heavily on base trip earnings.
- Tips contribute a relatively small percentage.

Business Issue

Limited earnings diversification.

Recommendation

- Improve rider tipping experience.
- Expand incentive campaigns.
- Optimize surge pricing strategy.

⚠ Data Quality Issues Identified

1. Potential Revenue Outliers

Issue

Some cities generate disproportionately high revenue compared to trip volume.

Impact

May distort performance comparisons.

Solution

- Apply outlier detection techniques.
- Validate revenue calculations.

2. Inconsistent Driver Performance

Issue

Large differences between driver earnings and completed trips.

Impact

May indicate operational inefficiencies.

Solution

- Analyze driver utilization rates.
 - Investigate idle time and trip assignment logic.
-

3. Geographic Imbalance

Issue

Demand concentration in limited cities.

Impact

Revenue dependency risk.

Solution

- Expand services in developing regions.
 - Optimize regional marketing budgets.
-

4. Payment Channel Dependency

Issue

High reliance on cash payments.

Impact

Higher fraud and reconciliation risks.

Solution

- Promote digital payment adoption.
 - Introduce loyalty rewards for electronic transactions.
-

5. Driver Acceptance Variability

Issue

Acceptance rates differ significantly across locations.

Impact

Customer experience inconsistency.

Solution

- City-specific incentive structures.
 - Better demand forecasting.
-

Final Conclusion

The dashboard demonstrates a rapidly growing ride-hailing business with strong revenue expansion and healthy fleet performance. However, several challenges remain, including geographic revenue concentration, inconsistent driver performance, varying acceptance rates, and dependence on cash payments.

By implementing targeted driver incentives, expanding digital payment adoption, improving fleet allocation, and strengthening data quality controls, Uber can further enhance operational efficiency, customer satisfaction, and long-term profitability across Saudi Arabia.
